INTENDED USE

The ArmorGuard® Gate system is used as a moveable longitudinal barrier section that can be installed in openings of rigid barrier systems. The purpose of the system is to create a crashworthy closure for rigid longitudinal barrier openings that is capable of being opened by no more than two people in less than 5 minutes. The ArmorGuard® Gate system can provide an opening for emergency and maintenance vehicles, traffic redirection, and construction zone access through rigid barriers as well as many other applications. The test level 3 system provides 8, 12, or 16-meter openings.

The ArmorGuard® Gate system is hinged at both ends and uses manual or pneumatic jacking systems to raise the gate section onto casters. This enables the system to be unhinged and swung open from either end, or the whole gate section can be disconnected at both ends and moved in any direction. Contact manufacturer for further information and installation instructions.

APPROVALS

The ArmorGuard® Gate system has been fully tested in conformance with NCHRP Report 350 Test Level 3 and approved by FHWA.

FHWA Acceptance Letter: B-87, July 6, 2001
HSSD/B-173, March 25, 2008
