INTENDED USE

The ArmorZone® is a water filled plastic longitudinal barrier that was designed to offer a practical solution for providing positive barrier separation in short term construction zones. The barrier is MASH TL-2. The free standing barrier sections come in 7' [2160] lengths and can be quickly interlocked using a dual pin connector to form a longitudinal barrier. The ArmorZone® can be located on firm soil, stable base, asphalt or concrete surfaces capable of supporting its weight and does not require anchorage or pinning to the foundations. Contact the manufacturer for further information and installation instructions.

The ArmorZone® also has an integral end terminal per SCI29.

APPROVALS

The ArmorZone® has been fully tested in conformance with MASH as a Test Level 2 longitudinal barrier and is accepted by FHWA.

FHWA Acceptance Letters: HSST/B-23 and HSST/CC-119, August 22, 2011
