INTENDED USE

The SMARTPOD™ is a redirective non-gating crash cushion and is ideally suited for the ends of rigid barriers, tollbooths, and other fixed objects. This system is designed to safely attenuate impacts from errant vehicles and reduce the severity of impacts. The system can stop or redirect an errant vehicle away from a median or roadside hazard. The system is typically applied to locations where head-on and side impacts are likely and where non-gating behavior is preferable.

The SMARTPOD™ can protect up to 24" wide hazards and has transitions to 30" and 36" wide hazards. Wider widths may affect the length of the transitions. Guardrail and other transitions are also available. Most Smart Cushion transitions are interchangeable with the SMARTPOD™.

APPROVALS

The SMARTPOD™ has been fully tested to be in compliance with MASH Test Level 3 and was determined eligible for Federal reimbursement by the FHWA. FHWA Eligibility Letter: CC-177
